Anouer Chouikh

Computer Engineering & Internet of Things Student
+216 94 012 237 | anouer.chouikh2005@gmail.com | Linkedin | Portfolio | GitHub

Profile

Computer Engineering student with years of hands-on experience across embedded systems, IoT, and robotics — including ESP32/Arduino firmware, sensor integration, and closed-loop control — alongside software engineering experience gained through a professional internship building full-stack web and mobile features. Comfortable working across the stack, from firmware to cloud to interface.

Education

ISITCom, Sousse — Bachelor's Degree in Computer Engineering & Internet of Things 2024 – Present

El Alia High School, Bizerte — Baccalaureate in Computer Science 2021 – 2024

Professional Experience

Software Engineering Intern — AndaluSoft Engineering June 2026 - August 2026

- Designed and implemented an end-to-end product rating feature for the mobile app across UI, backend, and frontend.
- Built account management and UI features for a full-stack ERP system using React and React Native.
- Developed and tested Symfony REST APIs with Doctrine ORM using Docker and Postman.
- Collaborated within a 5-person team (1 senior developer/team lead, 3 interns) using Git, Yarn, Composer, and Expo.

Projects

PET Recycling to 3D Printer Filament System — Solo Project 2024 – Present

- Designed and built a PET-to-filament extrusion machine with Arduino Mega control.
- Implemented PID temperature regulation, thermistor sensing, and stepper motor control.
- Developed ESP32 firmware for machine connectivity and remote control.
- Built a Symfony REST API with PostgreSQL for authentication, telemetry, and machine management.
- Developed React web and React Native mobile interfaces for machine monitoring and management.
- Designed a modular IoT architecture connecting embedded firmware, backend services, and user interfaces.

NeuroFocus — Wearable Physiological Monitoring System for Children 2026

- Interfaced MAX30100 (pulse oximeter), MPU6050 (accel/gyro), and GSR sensors with an ESP32 via I2C.
- Programmed firmware to collect real-time heart rate, RR interval, motion, and skin conductance metrics.
- Transmitted sensor payload via Wi-Fi to Firebase Realtime Database in JSON format every 1 second for remote monitoring.

Carthago — AI Waste Collection Robot 2024

- Designed and fabricated the prototype body and structural components for an autonomous waste-collection robot.
- Collaborated in a 4-person team, aligning mechanical design with CV and Raspberry Pi integration.

Leadership & Events

ROBOKIDS 2026 — Robotics Instructor & Organizer 06 July 2026 – 13 August 2026

Co-organized and led a hands-on robotics workshop for 25 kids (7–14), teaching Arduino/ESP32 programming and sensor-based projects like RC cars, while mentoring them through wiring and troubleshooting. Compensated on a revenue-share basis (20%); received strongly positive feedback from parents and high engagement from participants.

IEEE ESSTHS Speed Modelling Challenge 3.0 — Jury 2026

Assessed engineering and 3D modelling projects as a competition jury member.

IEEE ESSTHS Robots League 3.0 — Junior Challenge Jury 2025

Evaluated robotics projects and judged participants during the Junior Challenge competition.

Communities

IEEE ESSTHS SB Member 2024 - Present

Tunisian Youth Science Association, El Alia Member 2020 - Present

Tunisian Red Crescent, El Alia — Volunteer 2023

Participated in humanitarian relief efforts collecting and distributing clothing and food donations for Palestine crisis relief.

Skills

Technical:

Embedded & IoT: Arduino, ESP32, C, C++, I2C, BLE (HC-05/HC-06), 3D Modeling

Web & Mobile Development: React, React Native, PHP, Symfony, Doctrine, REST APIs

Tools & DevOps: Docker, Git/GitHub, Postman

Programming Languages: Python, Java, JavaScript, SQL

Data & Cloud: Firebase, NumPy/Pandas

Soft skills: Leadership · Teamwork · Problem-solving · Communication · Mentoring · Adaptability

Languages: Arabic (native), English (fluent), French (fluent).
